AXIOM Customer Request Portal — User guide

The portal is where you ask the Master Data team to **create**, **extend** or **change** a customer in SAP. You fill in one form; the team receives it, processes it and keeps you informed through TOPdesk. Every request gets a reference number and you receive a confirmation email.

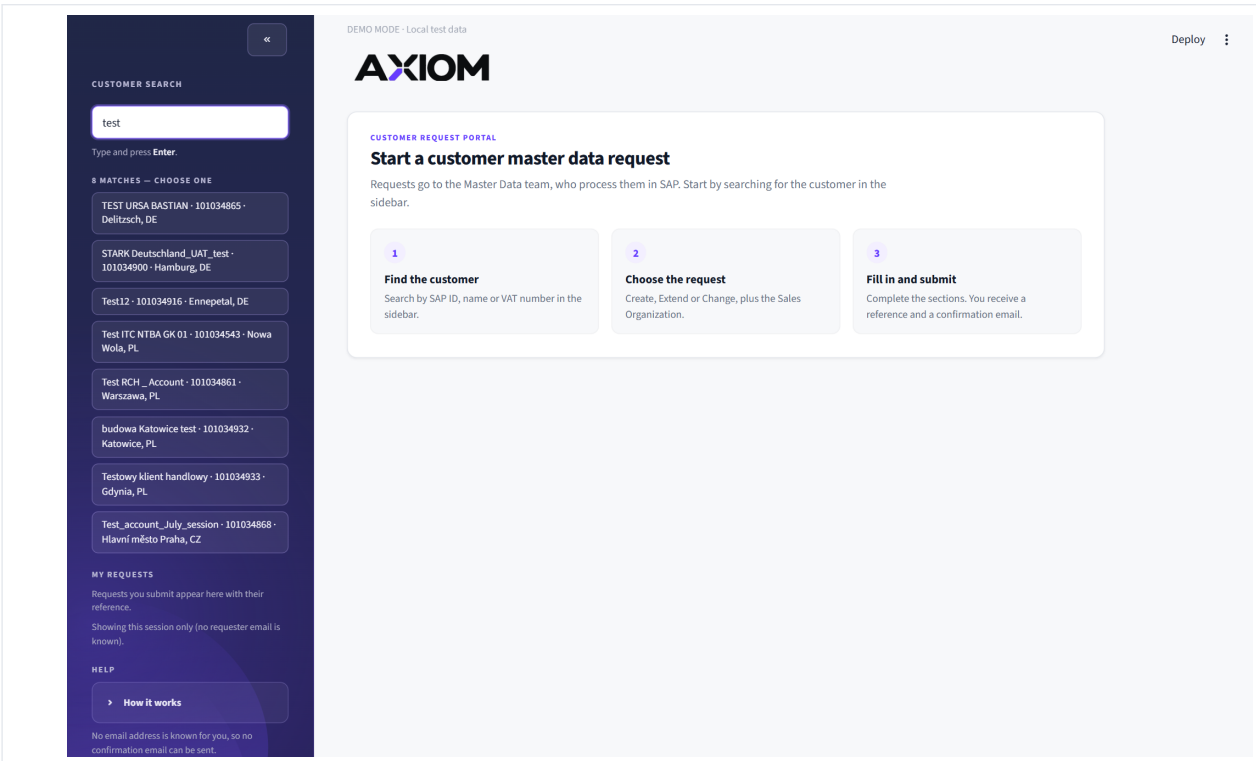

The start screen. Everything begins with the customer search in the sidebar.

1. Find the customer

Use **Customer search** at the top of the sidebar. Type a **SAP customer ID**, part of the **name** or a **VAT number** and press **Enter**.

- An exact SAP ID, or a search with a single match, opens the customer straight away.
- Several matches are listed under the search box: click the right one.
- The customer you are working on is shown under **Current customer**. **Clear customer** closes it.
- Customers you opened earlier in the session are listed under **Recent customers**, one click to reopen.

Searching "test" lists every matching customer with its SAP ID and city.

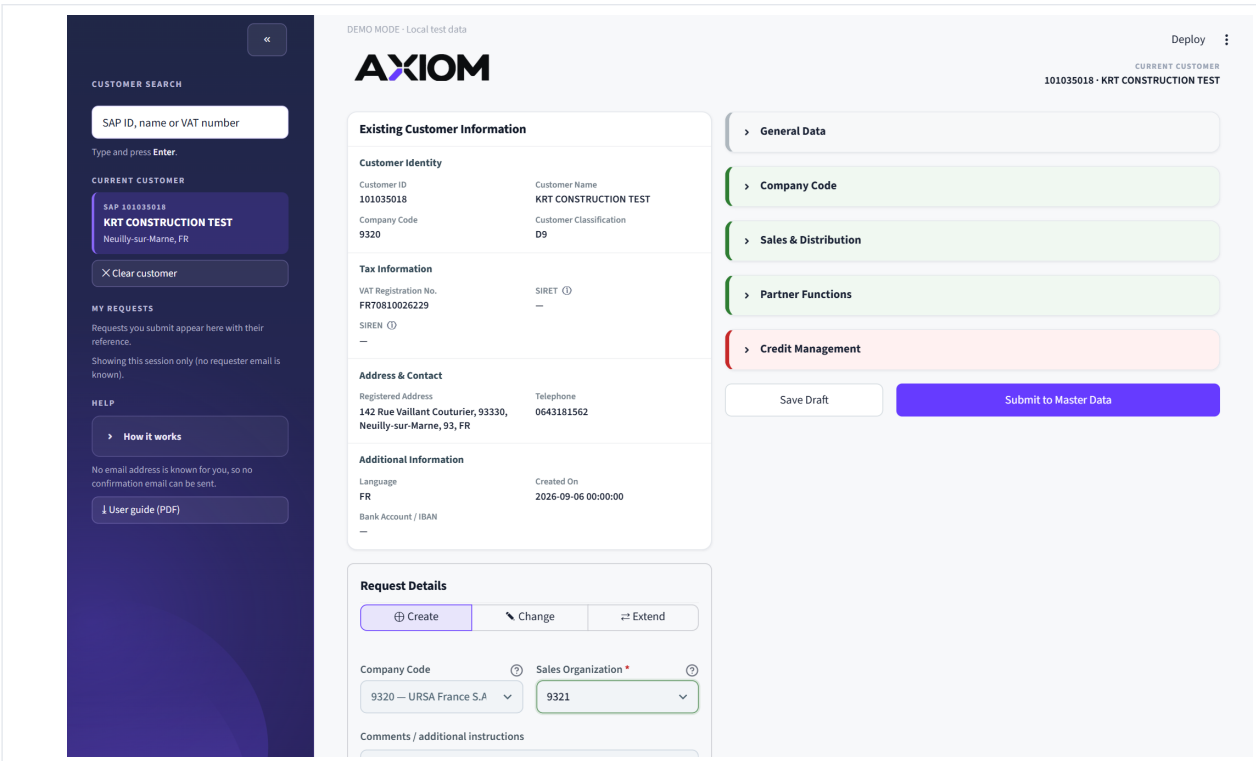

The left panel then shows the **Existing Customer Information**: identity, tax numbers, address and contact details as they are in SAP today.

2. Choose the request

In **Request Details** (left panel, below the customer card):

Choice	Use it when
Create	The customer needs to be set up in a Sales Organization of its own Company Code.
Extend	An existing customer must be extended into another sales area.
Change	Only some existing values must change.

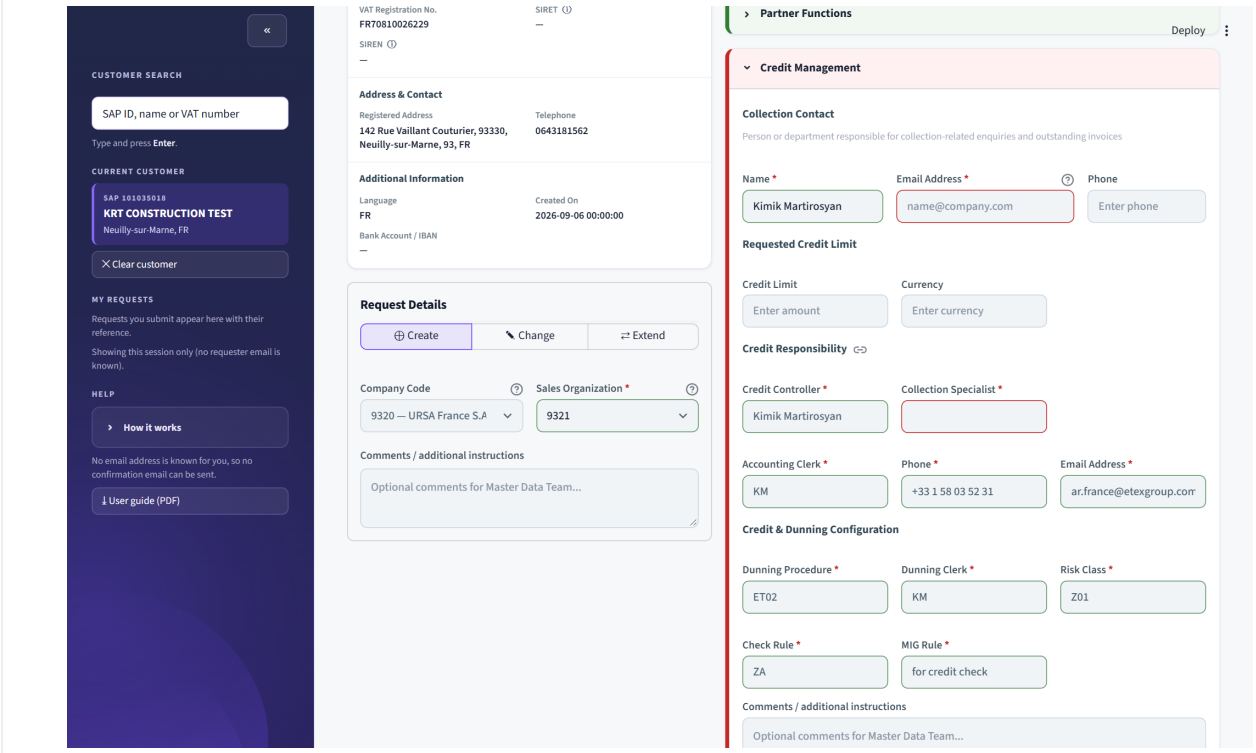

Then choose the **Sales Organization**. For **Create**, the **Company Code** is read from the customer (the Company Code it belongs to in SAP, also shown on the customer card) and cannot be changed. For **Extend** and **Change** you choose the Company Code yourself. Company Code and Sales Organization decide which fields, defaults and dropdown values the form offers. Until both are set, the sections on the right stay closed.

Create: the Company Code (9320) comes from the customer and is greyed out; only the Sales Organization is picked.

3. Create or Extend: fill in the sections

The right panel has five sections. Open each one by clicking its title.

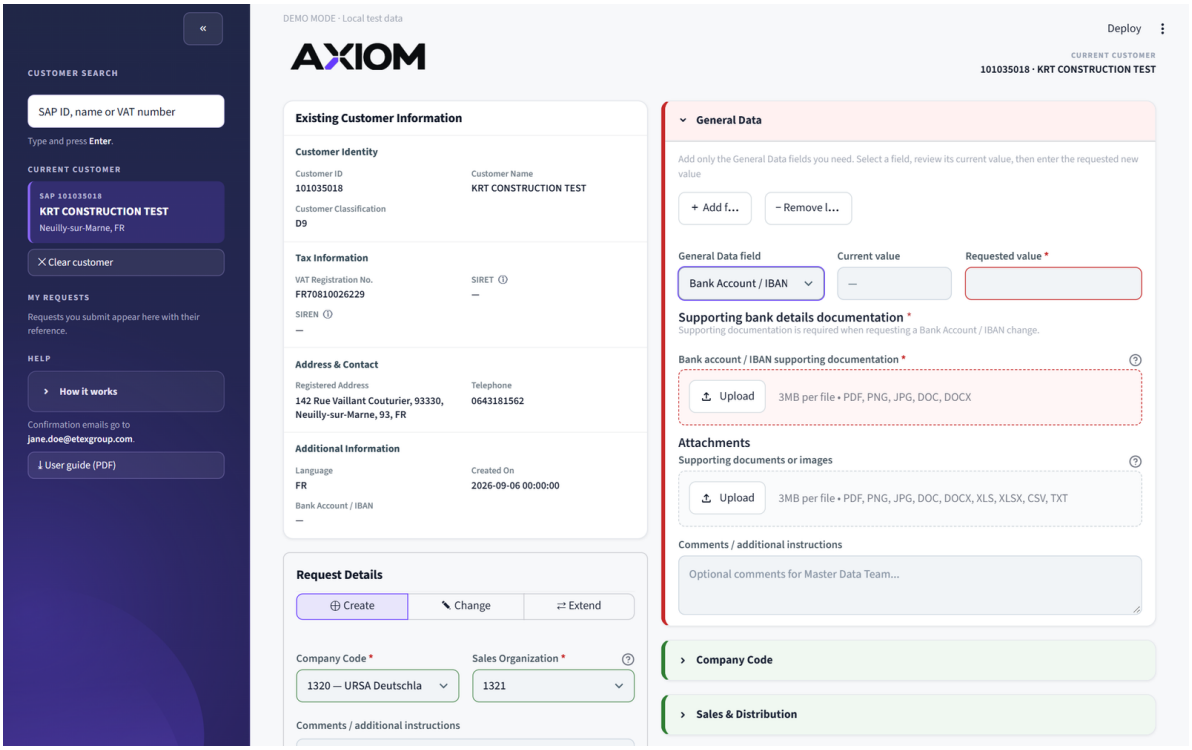

Credit Management is red because one required field (Email Address) is still empty; the other sections are green.

- Fields with a red * after the label are required. A **red border** means the field is still empty; it turns **green** when filled.
- Greyed-out fields are filled from the rules and cannot be edited.

- Yes/no flags such as **Pricing** are tick boxes below the other fields of their section, just above the comments. Ticked means *yes* (sent to SAP as X).
- The coloured bar and header of each section show its state, live while you type:

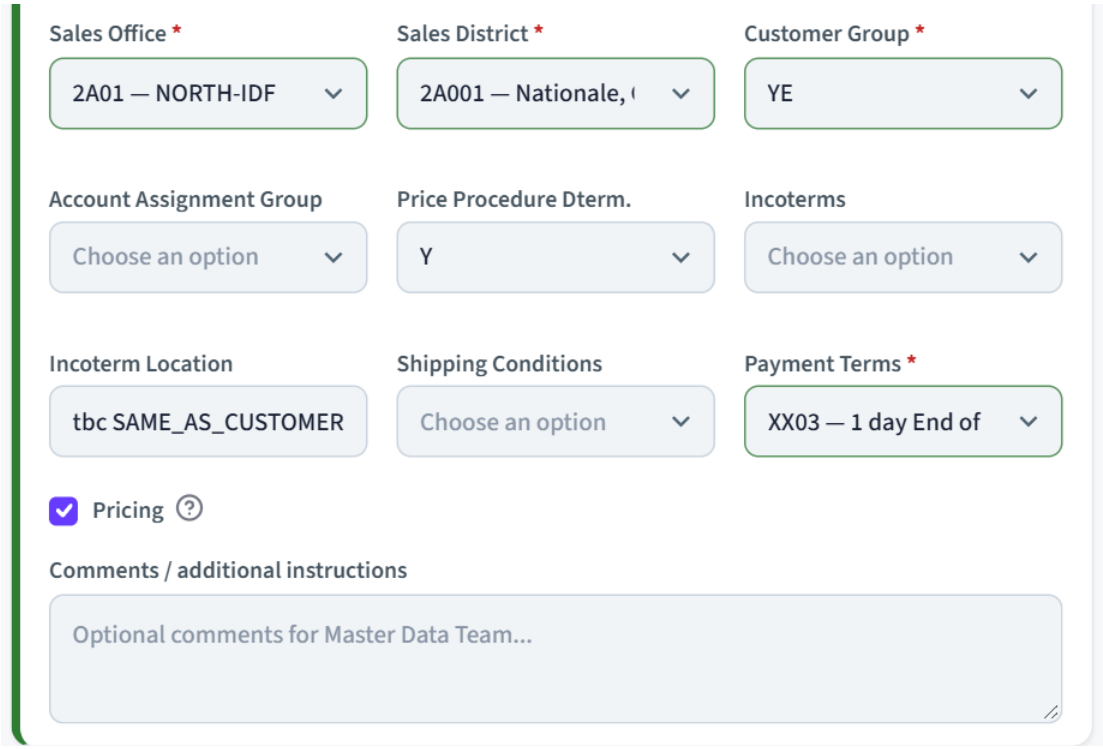

Colour	Meaning
Grey	Optional section, nothing entered (General Data).
Red	A required value is still missing, or a value is invalid (for example an email address).
Green	Everything required in the section is filled in.

- **General Data**: add only the general fields that must change (for example a new address). Choose the field, check its current value, enter the new value; once a field is chosen, its **Requested value** is required.
- **Bank Account / IBAN**: as soon as you add it, **Supporting bank details documentation** appears and is required. Its upload area stays red until you attach a bank letter or statement, then turns green.

Bank Account / IBAN added: the requested value and the bank document upload are required and General Data is red until both are provided.

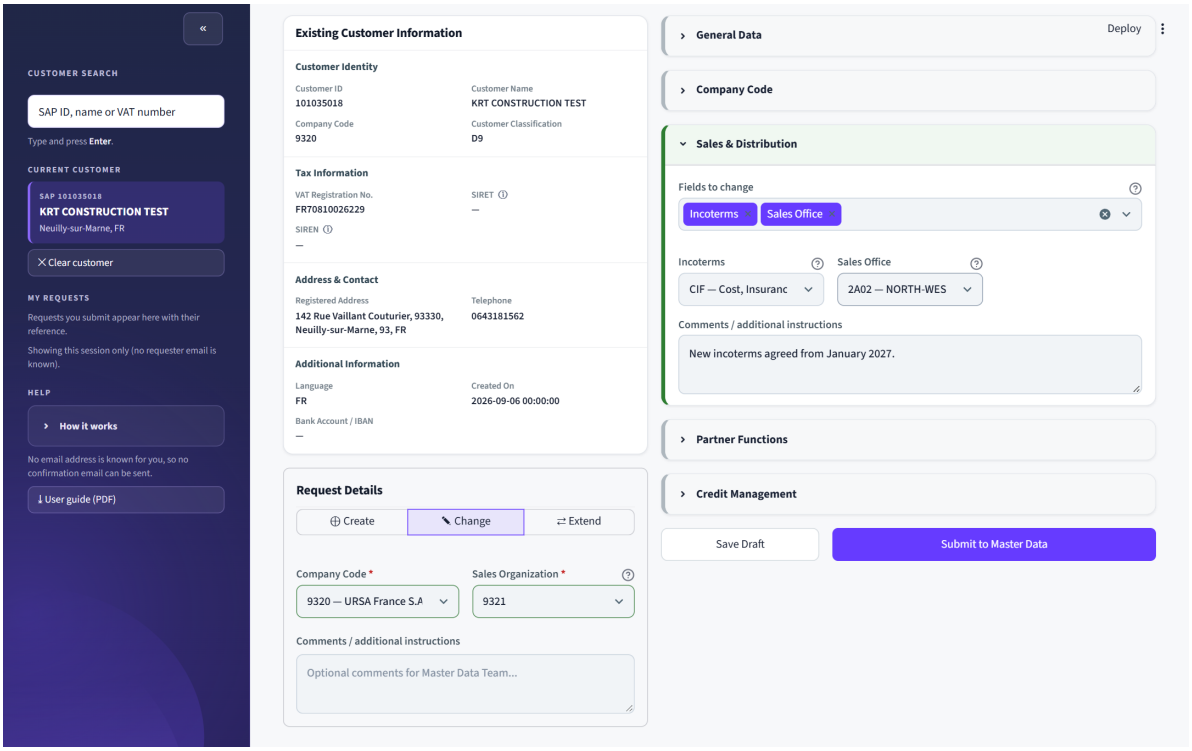

- **Attachments**: up to 3 MB per file and 5 MB in total (PDF, images, Office files, CSV, TXT).
- Every section has a **Comments / additional instructions** box for the Master Data team.

Pricing is a tick box on its own row below the Sales & Distribution fields, just above the comments.

4. Change: pick only what changes

With **Change**, nothing is mandatory. In each section use **Fields to change** to pick the fields you need; only those appear. Enter the new value for each. The current value is shown as a hint (hover the **?** icon or look at the empty field). A picked tick box (for example **Pricing**) starts the opposite of its current value, so picking it already requests the switch; untick or tick it as needed.

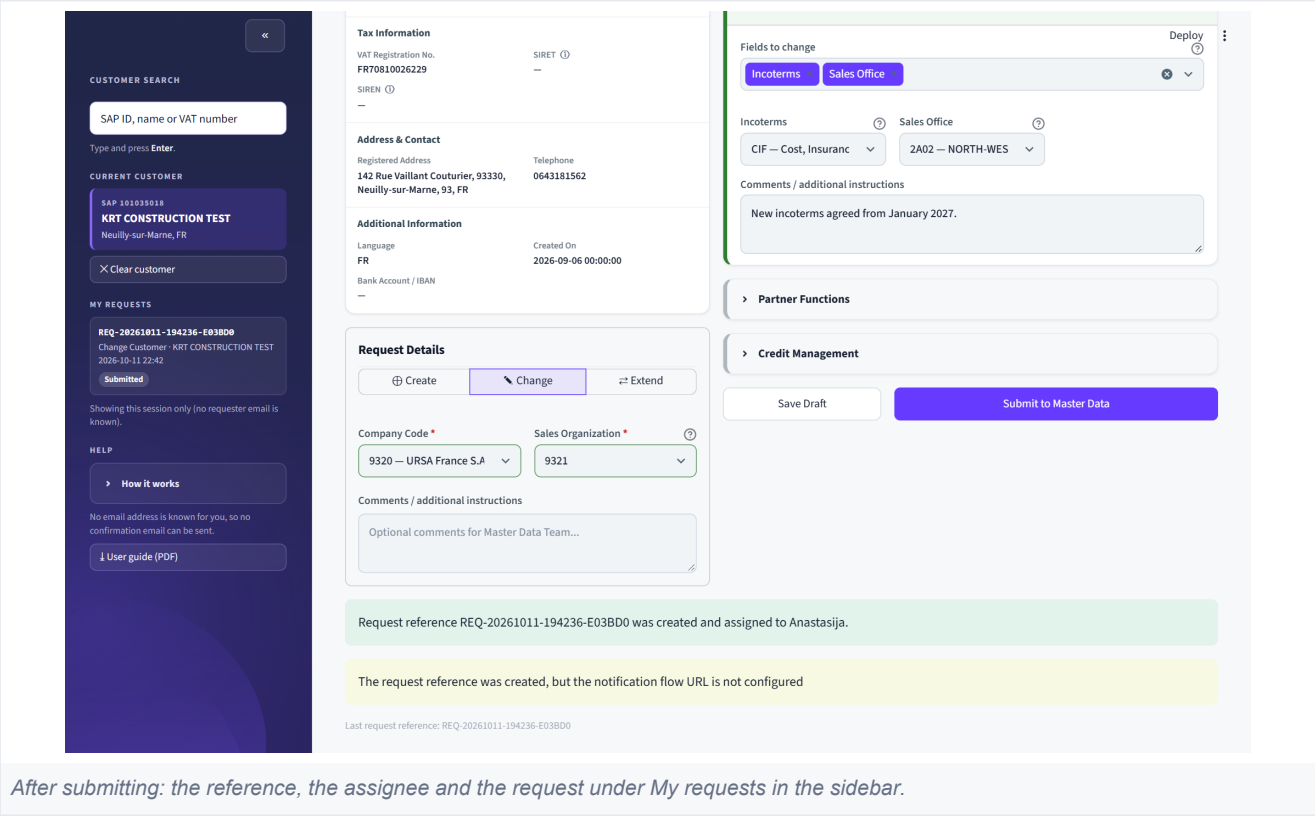

Change request: Incoterms and Sales Office picked and filled in, with a comment.

You can combine sections, for example a new Sales Office and a new invoice email address in one request. A picked field needs a value before you can submit; remove it from **Fields to change** if you no longer need it.

5. Submit and what happens next

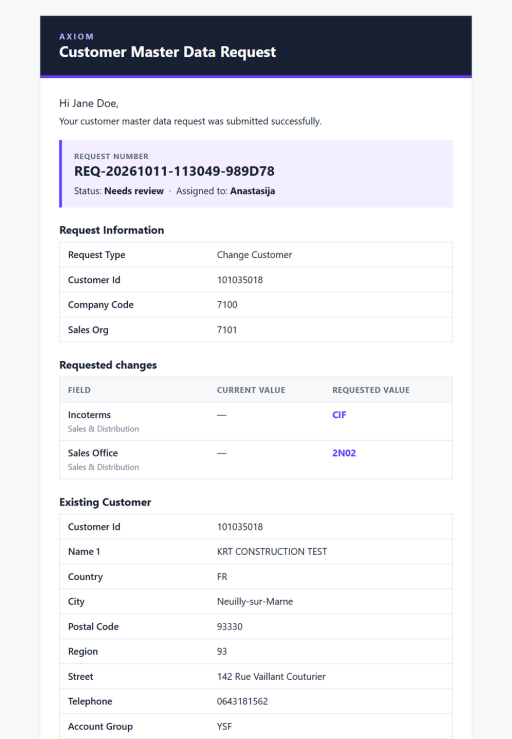

Press **Submit to Master Data**. If something is missing, a message lists exactly what to complete. Otherwise you see the **request reference**, who it is assigned to and where the confirmation was sent.

After submitting: the reference, the assignee and the request under My requests in the sidebar.

After a successful submit:

1. You receive a **confirmation email** with the reference, status and a summary of what you asked for.
2. The assigned Master Data team member gets a **Teams message** that opens your request directly.
3. The request appears under **My requests** in the sidebar, with its status once the portal is connected to the Workbench (*Needs review*, *In process*, *Waiting for you*, *On hold*, *Completed*).
4. Questions from the Master Data team come through **TOPdesk**; reply there.

AXIOM

Customer Master Data Request

Hi Jane Doe,

Your customer master data request was submitted successfully.

REQUEST NUMBER

REQ-20261011-113049-989D78

Status: **Needs review** · Assigned to: **Anastasija**

Request Information

Request Type	Change Customer
Customer Id	101035018
Company Code	7100
Sales Org	7101

Requested changes

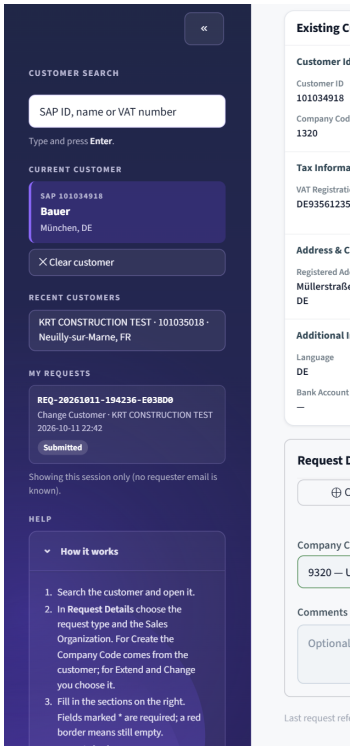

FIELD	CURRENT VALUE	REQUESTED VALUE
Incoterms Sales & Distribution	—	CIF
Sales Office Sales & Distribution	—	2N02

Existing Customer

Customer Id	101035018
Name 1	KRT CONSTRUCTION TEST
Country	FR
City	Neuilly-sur-Marne
Postal Code	93330
Region	93
Street	142 Rue Vaillant Couturier
Telephone	0643181562
Account Group	YSF

The confirmation email (AXIOM colours) with the requested changes.

Sidebar overview

Sidebar with current customer, recent customers, my requests and help.

Help → How it works repeats the steps above, and the line under it tells you which email address receives your confirmations. The **User guide (PDF)** button downloads this document.

Tips and troubleshooting

Situation	What to do
"No customer matches"	Check the spelling, try part of the name, the SAP ID or the VAT number.
Sections stay closed	Choose a Sales Organization (and for Extend / Change a Company Code) in Request Details.
Submit lists missing fields	Complete the fields named in the message; red borders show where they are.
"Supporting bank details documentation is required"	Upload a bank letter or statement under General Data when changing the IBAN.
"No email address is known for you"	You will not get a confirmation email; note the reference shown on screen.
Request reference shown, notification warning	The request is saved and the team will see it; only the notification failed.
You picked the wrong customer	**Clear customer** in the sidebar and search again; the form starts empty.
